## **DETAILED ACTION**

### ***Response to Arguments***

1. Applicant's arguments, see pages 15-18, filed on September 26, 2005, with respect to claims 14, 17-19, and 49-52 have been fully considered and are persuasive. The rejections of claims 14, 17-19, and 49-52 have been withdrawn.

### ***Allowable Subject Matter***

2. Claims 14, 17-19, and 23-82 are allowed.

### ***Reasons for Allowance***

3. The following is an examiner's statement of reasons for allowance.

The prior art of record, taken alone or in combination, does not teaches the construction of:

a method for controlling the sources of electric power in a system wherein at least two sources of electric power connected in parallel as described on:

independent claim 14, comprising the step of: determining a regulating signal with the follower regulator for producing the percentage of the maximum output for the source of electric power associated with the follower regulator based on the instruction from the master regulator and the operational characteristic,

independent claim 23, comprising the step of determining which regulator is a master regulator after power-up of the system,

independent claim 56, comprising: sending a first communication from the first regulator to the second regulator and sending a second communication from the second regulator to the first regulator, and

independent claim 77, comprising: reconfiguring the first regulator and the second regulator so that the first regulator operates as a follower regulator and the second regulator operates as a master regulator;

a power system for producing electrical power as described on independent claims 17, 49, and 71, comprising: at least one follower regulator for receiving the control signal, for sensing at least one operational characteristic of its associated source of electric power, and for determining whether to accept or reject the control signal based on the operational characteristic; and

a voltage regulator having functionality as a master regulator and as a follower regulator as described on:

independent claims 36 and 73, comprising: programming code stored in memory for determining whether the voltage regulator operates as a master regulator or as a follower regulator, and

independent claim 45, comprising: means for determining whether the regulator is the master regulator or follower regulator, wherein a regulator may function as a master regulator or a follower regulator,

independent claim 68, comprising: means for rejecting the control signal based on the means for independently verifying, and for using a different signal to control the source of electric power.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
